Ethan uses nine cubes to make a cuboid.

He then removes two cubes, leaving the other cubes where they are.

Draw what the new shape could be

(for example)

12,432 ÷ 168 = 74

Explain how this fact can be used to answer 73 × 168

$$\begin{array}{l}
 74 \times 168 = 12432 \\
 - 168 \text{ to get } 73 \times 168 \\
 (= 12264)
 \end{array}$$
