Find the size of angle x

$57 + 90 = 147$

$180 - 147 = 33^\circ$

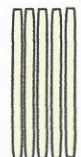

Charlie makes 100 chocolate apples to sell at a fair to raise money for charity.

Each chocolate apple needs:
1 apple
1 stick
100g of chocolate.

He pays the following prices

10 apples
cost £2.50

25 sticks
cost 50p

1kg chocolate
costs £4.75

Charlie sells each chocolate apple for £1.

How much money is left to go to charity?

$10 \times 2.50 = \pounds 25$ for 100 apples
 $4 \times 0.50 = \pounds 2$ for 100 sticks
 $10 \times 4.75 = \pounds 47.50$ for 10kg choc.

$\pounds 74.50$

$100 - 74.50 = \pounds 25.50$
