Name: _____ 5-a-day Gold

24th August

$\square^2 = 64$

$\frac{15}{45} = \frac{1}{\square}$

Martin is playing a game

He throws 8 balls at a target, one at a time.

Each hit is worth 9 points
Each miss is worth −5 points

Martin hits the target with 5 of the balls and misses with the rest.
How many points does Martin score in total?

Laura throws 3 balls at the target, one at a time.
Is it possible for Laura to score 0 points in total?

Write down all the square numbers between 70 and 110
