Joshua has £4 to spend on oranges.
Small oranges cost 25p each
Large oranges cost 35p each

He decides to buy only small oranges or only large oranges.

How many **more** small oranges than large oranges can he buy for £4?

$$£4 \div 0.25 = 16 \text{ small}$$

$$£4 \div 0.35 = 11.4 \text{ large}$$

$$16 - 11 = \underline{\underline{5}}$$
