

28th June

$$\frac{2}{11} \div 2$$

$$\frac{1}{11}$$

$$3\frac{1}{3} - 1\frac{3}{4}$$

$$\frac{10}{3} - \frac{7}{4}$$

$$= \frac{40 - 21}{12} = \frac{19}{12}$$

$$\frac{19}{12} = 1\frac{7}{12}$$

A piece of rope is 2.3 metres long.

Jenna cuts the rope into 8 pieces of equal length.

How long is each piece of rope?

$$0.2875 \text{ m}$$

$$2.3 \div 8$$

$$= 0.2875$$

Two numbers have a sum of 2  
The same numbers have difference of 6

What are the two numbers?

$$4 \text{ and } -2$$

Here is an isosceles triangle and two squares.

Find x

$$x = 360 - 90 - 90 - 52$$

$$= \underline{128^\circ}$$
