Here is a rule for the cost of a taxi

Cost = £5 plus an extra £1.50 for each mile

A journey cost £11

Work out how far the taxi travelled.

$$\begin{aligned} 11 - 5 &= \pounds 6 \\ 6 \div 1.50 &= \underline{4 \text{ miles}} \end{aligned}$$

James sells 6 cakes for £5
Maddie sells 4 cakes for £3.50

Which is better value?

James

$$\begin{aligned} \pounds 5 \div 6 &= 83\text{p} \\ \pounds 3.50 \div 4 &= 87\text{p} \end{aligned}$$

Circle the number that is in the wrong position
